NITROGEN - PHOSPHORUS - POTASH

**NITROGEN:**

Gives dark green color to plants and promotes increased leaf and stem growth. Feeds decomposition of organic material.

**PHOSPHORUS:**

Stimulates early root formation and growth. Gives rapid and vigorous start to plants and winter hardiness to fall seeding.

**POTASH:**

Increases disease resistance to plants. Essential to the formation and transfer of starches, sugars, and oils. Helps development of root system.

Fertilize turf to improve color, density, uniformity and resistance disease and traffic stress.

# FOREVERGREEN

## LAWN CARE PROGRAM

**FIRST APPLICATION**  
Early Spring

**SECOND APPLICATION**  
Mid-April to July

**THIRD APPLICATION**  
June to Sept

**FOURTH APPLICATION**  
Late Aug to Nov

**FEATURES**

- Prevent crabgrass and fertilize in one application
- Stops annual crabgrass and many other annual weedy grasses before they grow
- Slow release nitrogen for extended feeding
- Contains Iron for deep greening

**WHEN TO APPLY**

Apply early spring, prior to crabgrass germination. Properly timed applications will control existing crabgrass and prevent further emergence of crabgrass seedlings. Do not apply this product later than 4 weeks after crabgrass germination.

**HOW TO APPLY**

Apply evenly using a properly calibrated broadcast or drop spreader. For best results, apply within a few days after mowing and delay mowing again for a few days after the application. Performance is improved if application is followed by 1/2 inch of rainfall or sprinkler irrigation. Refer to product label on back of bag for complete application instructions and precautions.

**FEATURES**

- Broad spectrum weed control and fertilizes in one application
- Controls dandelions, thistle, clover, and over 150 other listed weeds
- Improves Color, Density and Uniformity to Turf
- Contains slow release nitrogen for a longer lasting green lawn

**WHEN TO APPLY**

Apply as the second application in late spring/summer when weeds are young and growing actively, preferably in the morning when dew is on the grass.

**HOW TO APPLY**

Apply evenly using a properly calibrated broadcast or drop spreader. Mow lawn to normal height 1-2 days before application. If grass is not moist at time of application, sprinkle lightly with water to allow the granules to adhere and remain on the leaf surface of the weeds. Do not wash from weed leaves for 1-2 days after application. Refer to product label on back of bag for complete application instructions and precautions.

**FEATURES**

- Specially blended formula for fast green-up power
- Promotes increased resistance to disease and drought stresses
- Provides a feeding of fertilizer to help improve the color, density, uniformity of the turf
- Includes slow release nutrients for long-lasting feeding plus iron for deeper greening

**WHEN TO APPLY**

Apply in summer as the third application of the lawn care program. May also be applied anytime throughout the growing season in 6 week intervals as a general-purpose turf fertilizer to promote a lush, healthier lawn in a single application.

**HOW TO APPLY**

Apply evenly using a properly calibrated broadcast or drop spreader. The fertilizer may be applied to dry or wet turf and a light watering after application will help activate the product sooner. Avoid application in moderate to severe drought conditions and applying when temperatures are over 90°F as the turf may become stressed.

**FEATURES**

- Specially blended formula to prepare turf for winter dormancy and improve spring green-up
- Promotes disease resistance and builds carbohydrates for dormant hardiness
- Provides a feeding of fertilizer to help improve the color, density and uniformity of the turf
- Includes slow release nutrients for long-lasting feeding plus iron for deeper greening

**WHEN TO APPLY**

Apply in fall as the last application of the growing season before turf dormancy. This product will help improve the color, density and uniformity to the turf plus improve spring green-up.

**HOW TO APPLY**

Apply evenly using a properly calibrated broadcast or drop spreader. The fertilizer may be applied to dry or wet turf and a light watering after application will help activate the product sooner. Avoid application in moderate to severe drought conditions and applying when temperatures are over 90°F as the turf may become stressed.

**ALLOW 6 WEEKS BETWEEN APPLICATIONS**
